Participation of SCK•CEN in the HLEG

Dear Sir/Madam,

We would like to express the support of the Belgian Nuclear Research Centre (SCK•CEN, Studiecentrum voor Kernenergie, Centre d'Etude de l'Energie Nucléaire) for the draft report edited by the High Level and Expert Group (HLEG) on low dose risk research in Europe.

SCK•CEN would be interested in joining the HLEG group and participating in any further initiative organised by the group, such as the proposed MELODI research strategy.

We are conscious that the various European countries have to combine their efforts and expertise within a common strategy in order to adequately prepare the future of radiobiological research in Europe. This common strategy would allow the important and fundamental issues in radiobiology to be addressed. The HLEG report is an excellent initiative allowing the scientific community to point out the various topics in radiobiology which need to be investigated further and we thank you for giving the scientists an opportunity to comment on the report.

We sincerely hope that SCK•CEN will be welcomed within the HLEG group, and remain at your disposal.

Yours faithfully,

Ir. Mark Loos
Manager of the Institute for Environment, Health and Safety
