

Comments on HLEG Draft Report

"The material suffers of the usual EU-disease: it is too long. The same could have been said in about half of the actual pages. Beside of that, the content is correct and precise, as far as a 20 year program could be precise. I have only one suggestion for a small correction: the list of references is not precise. I tried to find the first two items as they are given, but without success. The correct address of the first one is the following: http://www.cerrie.org/pdfs/cerrie_report_e-book.pdf

And the second one:

http://www.academie-sciences.fr/publications/rapports/pdf/dose_effet_07_04_05_gb.pdf

The problem in the document is that the underline covers the underscore characters."
